Sky Garden Reception

# Project Sky Garden

We recently had the pleasure of working in one of London's most recognisable and iconic buildings, the Walkie Talkie building 20 Fenchurch Street, to install part of what is now London's highest public garden. The building is host to several new innovative bars and restaurant concepts that we are proud to have been a part of and hope this sets the bar for the future of what can be achieved in an indoor space.

ST PUBLIC GA

# The Project

The Client was looking for a solution that would not only look great but also help the photosynthesis process that is vital in ensuring the growing plants would stay alive and healthy. From start to finish the project was carefully looked after by Mark and the team of engineers. Using the latest technology in Horticulture LED we were able to use a mix of settings to create conditions that would sustain the plants, help them grow and continue to reproduce. The fittings were designed in house at Qudos and manufactured in the UK through one of our partners

With our vast knowledge in horticulture installations we were able to fit the client's specifications and remained in a set budget. The challenge also required the Qudos team to work after hours. With the building and space being used during the day it was part of the requirements to complete the work during the night which we were able to do with no problems.

Like what you see?

If you would like to know more about this installation, then please email us and we would be happy to let you know more.

Looking to install your own indoor garden or wanting to gather information on a potential project? Then please send us an email and we will be in touch soon
